S3•Histo™

S3•Histo™ is a clearing agent that is used to replace xylene in both processing and staining applications. S3•Histo™ is not neurotoxic like xylene and is environmentally preferable in its usage and disposal. In most histology and cytology laboratories, S3•Histo™ can be substituted for xylene without any procedural changes being made. By eliminating xylene from the laboratory, S3•Histo™ helps to create a safer and healthier workplace as well as a safer and healthier environment.

- Does not contain xylenes or limonenes
- Rapidly clears tissues during processing and staining with similar times and results to that of xylene
- More cost effective than other xylene substitutes currently available

8510 Cedarhome Drive • PO Box 609 • Stanwood • WA 98292

Quick Facts:

S3•Histo™ for the tech:

- Rapidly clears tissues and tissue sections with speeds similar to that of xylene
- Produces clearing results similar to that of xylene during processing and staining
- Does not sensitize like clearants containing limonenes
- Can be recycled on most commercial xylene recyclers

S3•Histo™ for the pathologist:

- Produces bright, clear staining of tissue sections
- Does not interfere with any immunohistochemical stains or procedures
- Produces clearing of tissue blocks similar to that of xylene
